User Requirements Document

Dental Patient Record System

---

1. Purpose

The system is designed to help dental students and interns to:

- Record patient information
- Document dental cases for each patient
- Store images (clinical and X-ray)
- Track the condition of each tooth over time

---

2. Target Users

- Dental students
- Dental interns
- Dentists (optional in future)

---

3. System Overview

The system is:

- A digital record for each patient
- Contains personal and medical information
- Includes an interactive dental chart

- Allows recording data for each tooth separately with images

---

4. Functional Requirements

4.1 Patient Management

4.1.1 Add New Patient

The user must be able to enter:

- Name
- Date of birth
- Address
- Phone number
- Medical history:
  - Hypertension
  - Diabetes
  - Allergies
  - Other diseases

4.1.2 Automatic Age Calculation

- The system calculates age from date of birth
- Age updates automatically over time

4.2 Patient Profile View

The patient file must include:

- Personal information
- Medical history

- Dental chart

4.3 Dental Chart

4.3.1 Chart Display

- Show all teeth (upper and lower)
- Each tooth has a clear number

4.3.2 Tooth Interaction

- When clicking on a tooth
- A dedicated page or window opens for that tooth

4.4 Tooth Record Management

4.4.1 Add Tooth Data

The user must be able to enter text notes, such as:

- Endodontic treatment
- Canal length
- Crown
- Post and core

4.4.2 Upload Images

- Upload clinical photos
- Upload X-ray images

4.5 Visit Management (Very Important)

4.5.1 Multiple Visits per Tooth

- The system must allow multiple records for the same tooth

4.5.2 Visit Details

Each visit must include:

- Visit date
- Description
- Procedures
- Images

4.6 Tooth History

- Display all visits related to a tooth
- Show them in chronological order (timeline)

---

5. Non-Functional Requirements

5.1 Usability

- Simple and easy interface for dental students
- Fast data entry

5.2 Performance

- Fast image loading
- Quick access to patient records

5.3 Storage

- Secure storage of images
- Easy retrieval

6. User Scenarios

Scenario 1: Add Patient

- User opens the system
- Clicks "Add Patient"
- Enters data
- Clicks save

Scenario 2: Record Tooth Case

- Open patient profile
- Click on a tooth (e.g., Upper 5)
- Open tooth page
- Enter description
- Upload images
- Save

Scenario 3: View Tooth History

- Open tooth page
- View all previous visits
- Select a visit to see details and images
